

End of Year Activities

3rd – 5th Grade

1. We are getting cupcakes for the end of year party. When the teacher asked the class $\frac{1}{3}$ of the students said they want vanilla. Our class has 24 people, how many vanilla cupcakes do we need?

2. The teacher is buying snacks for the end of year party. The school provides pizza, but the teacher wants to also give chips and a drink. A bag of chips costs \$4.25 and can feed 15 students. A pack of 6 juice boxes cost \$5.15. How much would it cost to provide chips and drinks to 30 students?

3. I am tie-dyeing our class shirts to make enough money to go to soccer camp. Camp costs \$135. I tie-dye shirts for \$10 each. From a \$20 dye (that includes both dye and shirts) kit I can dye 22 shirts. How many shirts do I need to dye to make enough to go to camp. Use words and numbers to support your answer.
