

3rd – 5th Grade
Apple Orchard

1. Betsy has 22 apples and is making apple pies. Each pie needs 6 apples. Betsy claims that she can make 4 apple pies with her apples. Do you agree or disagree with Besty’s claim? Use words and numbers to support your decision.

2. Fred picked 40 apples. He wants to use $\frac{1}{2}$ of the apples to make apple sauce, $\frac{1}{4}$ of the apples to make apple crisp. Fred plans to use the rest of the apples to make fried apples with cinnamon. How many apples will Fred use to make his fried apples? Use words and numbers to support your answer.

3. The saying “a bushel and a peck” is an expression of love (you might hear this from an older relative). The saying originates from the measurement units of “bushel” and “peck”, which were used in the past to measure apples and other dry goods. A bushel holds approximately 40 pounds of apples. A peck holds 10 pounds of apples. Brian has 2 bushels and 3 pecks of apples. How many pounds of apples does Brian have? Use words and numbers to support your answer.
